

IMPACT

QUICK LOCKING

VALIFTER

BY FEDA

IMPACT CHARACTERISTIC

Dimensions 24X6X138 cm
Weight 11,03 kg

Impact is the quick solution to perform the unlock of manhole covers that are particularly difficult to lift due to fouling such as tar, frost, salt and various sediments, oxidation, deformation of the soil.

The **Impact** is used in an upright position, limiting the risks of occupational pathologies due to inappropriate postures. Made with interchangeable terminals in special steel (one with a flat tip and one with a pestle) that concentrate the energy of the percussion in the exact point where the incrustation acts, that is between the edge and the frame of the manhole cover.

Impact guarantees the right distance from the point of impact, protecting the operator from the possible departure of dangerous materials.

CE

CODE	MODEL
VAL-A-SI-1	Standard Version
VAL-A-SI-2	Chisel only version

THE ACCESSORIES

The **flat-tipped terminal** for use on the light between the frame and cover.

The **pestle-pointed terminal** for use on the surface of the cover.
